PRAISED BY INFORMATION PROFESSIONALS

"This reference is one of the best I've seen on diseases. ... If you could only buy one health set for your library, this would be an excellent choice. Students could use this not only for reports but for general reading material as well. Highly recommended."

— The Book Report (on the first edition of Human Diseases and Conditions).

NEW EDITION  Medical reference sources are often very technical and difficult for lay readers to understand. *Human Diseases and Conditions* is different. Created by a team of doctors and health education experts, this attractive, user-friendly encyclopedia was written for middle school, high school and consumer health readers.

The fully reviewed and revised second edition of *Human Diseases and Conditions* reflects changes in scholarship around human diseases, expands coverage from the first edition and its supplements, and presents the most accurate and up-to-date information available on diseases and conditions. From abscesses to zoonoses, over 450 diseases and conditions are profiled. Ranging from a half-page for minor conditions like hives to seven pages for major diseases like diabetes, articles include:

- A definition of the disease or condition
- An explanation of what it does to the body
- Information on the causes, symptoms, diagnosis, and treatment
- Prevention and lifestyle guidance where appropriate
- Brief bibliographies and referral lists

Curious students will appreciate the human interest element found in many entries, including:

- Case studies of teenagers, celebrities or other patients who have had or currently live with the illness
- Descriptions of how the health care system functions as it treats a person with the disease or condition

CREATED FOR YOUNG PEOPLE

Human Diseases and Conditions was written with teenagers and lay readers in mind and is a perfect starting point for research papers or answers to quick questions. Easy-to-ready entries cover widely experienced conditions like a sore throat and less common ailments such as Marfan syndrome, Chagas' disease and Ebola hemorrhagic fever.
